A message to parents

The Registry of Motor Vehicles (RMV) is excited to provide you with an updated version of The Parent’s Supervised Driving Program guide. This guide focuses on the critical role of the parent or guardian in the teen driver education process and encourages parents and teens to drive together in a variety of weather conditions and in unfamiliar settings, be it rural roads, highways, in cities, and in other heavy traffic situations. The manual provides important instructional modules that contain information about how and where to complete each lesson for maximum success.

Motor vehicle crashes are the leading cause of teen deaths. Roadway safety in Massachusetts is driven by the behavior of each individual driver. Your commitment to assist your child in maximizing this learning experience is commendable.

Allowing your teen to spend as much time as possible behind the wheel will increase the development of his or her driving skills. By offering an enhanced supervised driving experience, we hope that parents and guardians will extend the supervised driving period beyond the 40-hour state requirement.

The time you spend teaching your children how to drive might just save their lives. If you have questions or need additional information, the RMV is ready to help. Please visit us at https://www.mass.gov/info-details/junior-operator-license-jol-requirements
LOG YOUR DRIVES.
FOCUS ON YOUR TEEN.

Teaching your teen to drive presents enough challenges. With RoadReady, your focus can remain where it needs to be: on your teen and on the road. “Start a New Drive” and RoadReady will log the rest. Download your log to verify you’ve completed your state requirement.

LEARN MORE AT ROADREADYAPP.COM
When your child gets their learner’s permit it can be both exciting and stressful at the same time. The thought of a young, excited, inexperienced teenager behind the wheel for the first time makes us all understandably nervous about handing over the keys.

Teaching your children how to drive is a multi-step process that will hopefully help them build confidence on the road and help you gain trust in their abilities. We are pleased to provide The Parent’s Supervised Driving Program to map out – for both parents and teens – the path to becoming a safe and successful driver.

While some of this information may seem obvious, studies show that utilizing a phased approach helps both driver and teacher understand driving milestones and the responsibilities and challenges of each phase; this program emphasizes accomplishments, rather than a specific timeline, because everyone learns at a different pace.

Safety Insurance is proud to sponsor this official program, and hopes that it will make the driving experience a safer one for both you and your teen driver.

Safe Driving,

George M. Murphy
President and CEO of Safety Insurance
SAFETY JUST COMES NATURALLY.

Toyota Safety Sense™ is now standard on many new Toyotas.

Now that active safety features like a Pre-Collision System (PCS), Lane Departure Alert (LDA) and others come standard on many new Toyotas – including the all-new Camry – you get extra peace of mind at no extra charge. Toyota Safety Sense™ (TSS). Designed for safety.

Prototype shown with options. Production model may vary.

1. Drivers are responsible for their own safe driving. Always pay attention to your surroundings and drive safely. System effectiveness is dependent on many factors including road, weather and vehicle conditions. See Owner's Manual for additional limitations and details.

2. The TSS Pre-Collision System is designed to help avoid or reduce the crash speed and damage in certain frontal collisions only. It is not a substitute for safe and attentive driving. System effectiveness is dependent on many factors including road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details.

3. Lane Departure Alert is designed to read visible lane markers under certain conditions, and provide visual and audible alerts when lane departure is detected. It is not a collision-avoidance system or a substitute for safe and attentive driving. Effectiveness is dependent on many factors including road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details. ©2017 Toyota Motor Sales, U.S.A., Inc.
Sponsor message

At Toyota, we have a vision of saving lives and amplifying the message of safe driving to teens, parents and educators. That is why we have partnered with The Parent’s Supervised Driving Program to promote safe driving for your teen and family. At the completion of this learning guide, we hope you and your teen will have a much greater understanding of what it takes to be safe when you get behind the wheel of a motor vehicle.

We all know that driving poses certain risks. For teenagers, however, statistics reveal that the risk of being in a crash is greatest within the first 24 months of driving – higher than any other point in their lives.

As parents, you are the most important influence on your teen driver. By following the information in this guide, you will help teach them about the vehicles we drive, the roads we use, and the serious responsibility of being a driver.

And, while Toyota continues to design and manufacture leading-edge technology to help keep our customers safe, we fully understand that the best safety device in any car is the hands of the driver. That’s you and your teen. So be the driver you want your teen to be, and show them that it’s up to each of us to drive safely.

Enjoy the experience with your teen as you coach them through this guide. And together, Let’s Go Places.
DANGEROUS AT ANY SPEED

We are proud to present a unique new initiative, designed from the ground up to assist educators and law enforcement personnel in teaching young drivers the likely negative impacts of impaired driving. This program consists of five separate, fully researched and tested learning seminars which discourage a variety of driving impairments, including alcohol, drugs, and distraction. Police departments, educational institutions, and highway agencies across the country have utilized these programs to improve the safety of their motorways. The individual lessons can be brought to your young drivers at no cost in whatever combination best fits your needs and lesson plan.

The highlight of this curriculum is our RIDE (Realistic Impaired Driving Experience) vehicle, an electric car which simulates the harmful effects of impaired driving in a safe, fun atmosphere. Our team of trained instructors have developed this program as part of our community outreach and betterment efforts in order to encourage participation and attention for lasting life lessons.

All activities are conducted with three things in mind:

SAFETY, LEARNING, AND FUN!

Message to Parents

For your teen, a driver’s license represents maturity and independence. As parents, we understand it means so much more. That is why the Massachusetts Army National Guard is proud to collaborate with The Parents Supervised Driving Program.

I am honored and excited to have the opportunity to present you with just a few of the offering of the Massachusetts Army Guard. The men and women of your Guard are parents. They are educators. They are leaders and students. Most of all, our Soldiers are all Bay Staters themselves. It is not only our duty, but our privilege to be able to turn some of our immense resources inward to make the Commonwealth a better place to live. My name is Lieutenant Colonel Eric DiNoto, and I, like all National Guardsmen, love my community. I live in Melrose, MA with my wife and two great teenage daughters. To say that I am invested in enhancing the safety and education of the young people of the Commonwealth would be an understatement.

The betterment of our communities is always at the forefront of our minds. As such, we take advantage of any opportunity to partner with organizations and groups dedicated to the same. Our Soldiers are present in all 351 Massachusetts cities and towns, and they stand ready to assist these collaborative efforts. It is my pleasure to announce our brand-new initiative dedicated to improving the safety of our motorways. We ask that you refer to the opposite page for details and contact information.

Thank you for taking the time to read this letter. I look forward to working together to improve the safety and education of the Commonwealth.

Sincerely,

Lieutenant Colonel Eric DiNoto
MAARNG, Recruiting and Retention Battallion
Commanding
Welcome parents of teen drivers!

The Parent’s Supervised Driving Program is a resource for parents to utilize when teaching their teen to drive.

1. This program includes 13 core driving skills.
   - Read through each section at home before your teen starts a new skill.

2. Log your driving time. This can be done two ways:
   - Carry this printed guide with you during the drive and use the printed log section – you or your teen can log the supervised driving hours once the drive is finished.
   - Download and use the free RoadReady app to track driving time. RoadReady tracks your teen’s driving hours until you reach the state requirements.

3. Turn in your log when applying for your license.

About this program
Developed by Safe Roads Alliance, a non-profit dedicated to promoting safer driving through education for drivers of all ages, The Parent’s Supervised Driving Program is designed to improve teen driver safety by providing parents and guardians with a methodical approach to teaching the requisite driving skills. Each lesson concentrates on a particular sequential skill. Parents are in the best position to help their teens become safe, smart, and skilled drivers.

The Parent’s Supervised Driving Program also includes a website, social media pages, and a mobile app, RoadReady®.

About supervising teen drivers

The Parent’s Supervised Driving Program gives you a simple, easy-to-follow plan you can use to help your teen be a safe and responsible driver.

Some thoughts as you begin this exciting experience together:

Make an effort to enjoy the learning process: Driving is a big step toward independence, and your teen is entering a new phase of life. You’ll both remember this experience for years to come. Make it a good memory!

Practice makes perfect: Studies show that the risk of a crash diminishes with experience. The more time you can spend driving with your teen, the less likely it is they’ll crash when they begin driving alone. Driving in a variety of circumstances is equally important. While using this program, you should drive on all types of roads. Make sure your teen gets exposure to a variety of roadways, and in different conditions as well: at night; in rain, fog, and snow; and in heavy and light traffic.

Be a driving role model: It’s not enough to say, “Do as I say.” Children imitate their parents'/guardians’ behavior, so your driving should set a good example for your teen to emulate. Be sure that you:

• Obey all traffic laws.
• Correct any unsafe driving habits (driving aggressively, rolling through stop signs, accelerating through yellow lights, speeding, etc.).
• Refrain from using your cell phone while driving.
• Always wear your seat belt, and remind your teen that buckling up is the law. This will need to be an ongoing conversation — buckle up every trip, every time.

Tips for teaching your teen

• Seat belts must always be worn properly by everyone in the vehicle.
• Before each session, discuss the goals of the day’s lesson.
• Before each new lesson, review what was learned during the previous lesson.
• Keep instructions simple and concise. Say where to go and what action to take. For example: “Drive to the corner and turn right.”
• The feedback you give should be calm, precise, and immediate. Be patient and alert at all times. Remember to give positive feedback when your teen succeeds!
• When your teen makes a mistake, which will happen often, do not criticize. Remain calm and simply repeat the maneuver until it’s done correctly. To minimize their frustration, emphasize to your teen that mistakes are a normal part of learning.
• These lessons should be consistent with what is taught by your teen’s driving instructor. If you teach something differently, your teen will be confused and learning will be more difficult. If the lessons in this program are different from the instructor’s, contact the instructor to clarify the discrepancy.
• Remember that students learn at different paces. Make sure your teen has mastered each skill before you move on to the next lesson, even if that means repeating a lesson several times. Patience and practice will pay off in the long run.
• Integrate night driving into as many lessons as possible.

Most importantly, make sure the vehicle you use for training is safe. Confirm that the brakes have been recently inspected, and check to make sure the tires have sufficient tread depth. It’s generally recommended that you do not train in larger vehicles that lack stability control.
SCAN THE STREET FOR WHEELS AND FEET

TOP 5 TIPS: DO YOUR PART TO STOP CRASHES INVOLVING PEOPLE WALKING OR BICYCLING.

1. SLOW DOWN AND PAY ATTENTION:
   Vehicles have the potential to inflict the most harm.

2. AVOID THE DOUBLE THREAT:
   Be careful when approaching a crosswalk. If another driver has stopped, someone may be crossing.

3. AVOID DOORING:
   Check your mirrors for bicyclists before opening car doors.

4. LEAVE A BUFFER:
   When passing a bicyclist, slow down and keep a minimum passing distance of 3 feet.

5. BE AWARE AND RESPECTFUL OF EVERYONE ON THE ROAD!

WE ALL NEED TO PAY MORE ATTENTION IN ORDER TO KEEP OUR FAMILIES, FRIENDS, AND CHILDREN SAFE.
It’s a fact: U.S. teens are 3x more likely to crash than drivers over 20\textsuperscript{1} and motor vehicle crashes are by far the leading cause of death for teens 16 – 19 years old\textsuperscript{2}.

Teens who train with In Control before their license exam are far less likely to crash.

The In Control program provides skills, instinctual reactions, and experiences that are proven to make safer drivers. Most new drivers also qualify for auto insurance discounts after graduating.

Safe Roads Alliance and Safety Insurance are committed to making our roads safer. We urge you to add In Control’s Crash Prevention Training to your “To Do” list in the weeks just prior to taking your teen for their license test.

Visit www.DriveInControl.org or call (978) 658-4144 for details and consider joining your new driver at the course. You may be amazed how much you learn about something you do nearly every day.

Vehicle control for supervisors

Teaching a new driver can be stressful, but knowing you have some control can help. Professional driver’s education instructors are taught emergency responses to potential hazards that can crop up with an inexperienced driver behind the wheel. Here are some skills you can learn to help you maintain control from the passenger seat while teaching:

- **Emergency shifting**: In a quiet, large, level, empty area, practice shifting the transmission from drive to neutral.

- **Taking the wheel**: With an experienced driver in the driver’s seat, in a quiet, large, level, empty area, practice steering the car with your left hand from the passenger seat.

- **Mirrors**: Adjust the mirror on the passenger sun visor so you can use it as a rearview mirror. If the right side mirror is properly adjusted, you can use it to monitor traffic in the rear from the passenger seat.

- **Awareness**: Never assume everything is okay. Always check and re-check mirrors before you give instructions to your teen.

- **Emergency stopping**: Practice stopping the car with the parking brake (if your vehicle’s parking brake is located between the seats). Remember that this can be dangerous, even at low speeds, and should only be used as a last resort.

Driving has changed

Chances are, today’s cars are not the same as they were when you learned to drive. To teach your teen effectively, you need to know about a few important recent changes in how cars work, how we drive, and how driving is taught.

**Anti-lock Brake System (ABS)**: Most newer cars offer ABS as standard equipment. ABS is a dramatic safety improvement that works by letting the tires rotate, rather than lock up, when the brake is engaged. This allows drivers to turn the car in an emergency stop. ABS should be used with firm, continuous pressure. The brakes may shake and grind when applied, which often concerns users – but this is a normal function of ABS. To find out if your car has ABS, check the instrument panel after you turn on the ignition or read the owner’s manual.

Note: When driving a car without ABS, the old rules still apply. Don’t “slam” the brakes. Rather, press the brake pedal firmly. The intention is to stop quickly, but also to avoid locking the brakes and skidding. Skidding causes a loss of control and requires more distance to stop.

**Air bags**: Air bags are designed to work with seat belts, which must be worn for the air bags to be effective. The use of a safety belt allows the driver to stay behind the wheel in order to take advantage of the airbag. Since air bags deploy out of the steering wheel on impact, it’s important to keep your hands and arms in the recommended position.

**Steering wheel hand position**: Most of us were taught to position our hands at 10 and 2 o’clock on the steering wheel. It’s now suggested that you hold the wheel at 9 and 3 o’clock. This gives you better vehicle control and also lessens the risk of injury if the airbag was to deploy.
Distracted and drugged driving

Distracted driving involves any activity that takes the driver’s attention away from the primary task of driving. Distracted driving, impairment, speeding, and not wearing seat belts are all risky choices that can lead to serious injury and death. Teens, who are still learning the complex skills of driving, are particularly susceptible to distractions while behind the wheel. Don’t let you or your teen become another statistic. Here are the facts:

- Motor vehicle crashes are the leading cause of death for U.S. teens. Mile for mile, teens aged 16–19 are involved in 3 times as many fatal crashes as all other drivers. And one in three teens who text say they have done so while driving.
- According to NHTSA, in 2017, 3,166 people were killed in distraction-related crashes nationwide, which is slightly lower than the fatalities in 2016, but still higher than 2013. In 2015, an estimated 391,000 were involved in crashes involving a distracted driver.
- A Virginia Tech Transportation Institute study revealed that physically dialing a phone while driving increases the risk of a crash as much as 6 times. Texting is riskier still, increasing collision risk by 23 times.

To combat this growing epidemic, we suggest the following:

- **Set a good example:** Kids observe and learn from their parents. Put your phone away while driving and only use it when you are safely pulled over. According to the Pew Research Center, 40 percent of teens, aged 12 to 17 say they have been in a car when the driver used a cell phone in a way that put themselves and others in danger.
- **Talk to your teen:** Discuss the risks and responsibilities of driving and the danger of dividing their attention between a phone and the road. Show them the statistics related to distracted driving and urge them to share what they learn with their friends. Encourage them to speak up if they are a passenger in a car with a distracted driver.
- **Establish ground rules:** Set up family rules about not using the phone or other electronic devices while behind the wheel. Enforce the limits set by the graduated driver licensing program (GDL).
- **Sign a pledge:** Have your teen take action by agreeing to a family contract about wearing safety belts, not speeding, avoiding all drugs and alcohol if you know you have to drive, and not using a cell phone behind the wheel. Agree on penalties for violating the pledge, such as paying for tickets or loss of driving privileges.

Other dangerous distractions: In addition to cell phone use, distracted driving can include eating, grooming, drinking, listening to or adjusting the radio, using the GPS, talking to passengers, or watching a video, just to name a few activities. Inexperienced drivers are particularly susceptible to these kinds of distractions. Wearing both earbuds while driving is also dangerous, as well as illegal. Earbuds can distract a driver and diminish their ability to hear emergency vehicles and other audio safety signals. One earbud is allowed, but not both.

Just because it’s legal doesn’t mean it’s safe:

Laws for operating under the influence of alcohol also apply to drugs. Almost any drug can affect your driving skills. Illegal drugs, prescription medicines, and over-the-counter medicines can all make it dangerous to drive. Smoking or consuming marijuana makes it more difficult to respond to sights and sounds. This makes you dangerous as a driver because it lowers your ability to handle a quick series of tasks. The most serious problems occur when facing an unexpected event, such as a car coming from a side street or a child running out from between parked cars. These problems get worse after dark, because marijuana also causes decreased visibility at night.

**Massachusetts law has decriminalized certain aspects of possession and/or use of marijuana. However, operating a motor vehicle while under the influence of marijuana is still illegal and remains a criminal offense.**

- It is illegal to drive under the influence of marijuana.
- It is illegal to use marijuana under the age of 21.
- Marijuana can negatively impact your ability to safely control a vehicle.
- Marijuana will slow your reaction time and impair your judgment.
- Marijuana effects your coordination, your memory, and ability to problem-solve.
- Combining marijuana and alcohol, even in small doses, greatly increases the risk of getting into a crash.

If you plan to drive, be smart and have no alcohol, marijuana, or any other drugs in your system.
Before you start the engine

**Goal:** Teach your teen vehicle basics before actual driving begins.

**Location:** Parked. This is a non-driving lesson.

**Lesson one – touring the vehicle**
Walk around the outside of the car with your teen. Instruct them to look for leaks and hazards such as broken glass, and to make sure it’s clear behind the vehicle as well as in front of the vehicle.

Have your teen practice these basic skills until they don’t need help:
- Starting and stopping the engine
- Naming and operating all dashboard controls
- Checking oil level
- Checking wiper fluid
- Checking tire pressure
- Checking tire tread depth

**Lesson two – mirror settings**
The method below provides the best view of adjacent lanes, for maximum safety.

- **Inside mirror:** Have your teen sit up straight in the driver’s seat and adjust the inside mirror so that it frames the entire rear window. This is the main mirror for viewing what is behind the vehicle.
- **Left-side mirror:** Have your teen lean their head toward the left-side window, and set the left mirror so they can barely see the side of the car. When they sit up straight, the car should no longer be visible in the mirror.
- **Right-side mirror:** Do the same to the right. Have your teen lean to the right over the car’s center console, and set the right mirror so they can barely see the right side of the car.

**Lesson three – checking blind spots**
Additionally, teach your teen how to look over their shoulder to check the “blind spot” on each side of the car that cannot be seen in the mirrors.

**Lesson four – seating position**
A proper seat position is critical to maintaining control of the vehicle. Your teen should sit with their back firmly against the seat. There should be at least 10 inches between the steering wheel and the driver’s chest, with the air bag pointing at the chest. The top of the steering wheel should be no higher than the shoulders. Move the seat forward or backward so that the driver’s heel touches the floor and can pivot quickly between the brake and accelerator. Shorter drivers may need a seat cushion or pedal extenders to sit safely 10 inches from the air bag. The head restraint should be at the center of the driver’s head.

**Lesson five – proper footwear**
Wearing the right shoes has an effect on operating a vehicle. Flip flops are dangerous to wear while driving, so encourage your teen to wear shoes that have a flat sole and a back. Driving barefoot is unsafe as well. Keep an extra pair of shoes in the car so your teen can remember to wear the proper shoes while driving. If they need to brake suddenly, the wrong footwear can make for an unsafe situation.
Moving, steering, and stopping

**Goal:** Teach your teen to consistently start, stop, and turn smoothly with full vehicle control.

**Location:** A large, level, mostly empty area.

Everyone in the vehicle **must** be properly buckled up.

Before starting, coach your teen to always signal and check mirrors and blind spots before changing the speed, position, or direction of the car. Remind them when needed.

Have your teen drive around the perimeter of the lot several times at a slow speed. Have them stop and start frequently, practicing smooth hand-to-hand steering, braking, and accelerating.

Pick several targets in the large, level, empty practice area, and have your teen drive to them at specific speeds. For example, “Drive to the stop sign at 15 mph.” Focus on steady speed and smooth starts and stops.

Once your teen is braking smoothly, practice “hard, smooth stops” at slightly higher speeds (approximately 25–30 mph). *Hint: Curling toes back just before braking results in smoother stops.* It eases the pressure on the brake.

**Lesson one – steps toward turning**

- **Turning right**
  - Step 1: Left hand slides down, right hand pulls down, left hand pulls down, right hand slides down.
  - Step 2: Left hand pushes up, right hand slides up, left hand slides up, right hand pushes up.
  - Step 3: Left hand slides down, right hand pulls down, left hand pulls down, right hand slides down.

- **Turning left**
  - Step 1: Left hand slides down, right hand pulls down, left hand pulls down, right hand slides down.
  - Step 2: Left hand pushes up, right hand slides up, left hand slides up, right hand pushes up.
  - Step 3: Left hand slides down, right hand pulls down, left hand pulls down, right hand slides down.

*With hand-to-hand steering your hands do not cross each other.*

**Lesson two – turning techniques**

- Ease off the accelerator or use the brake to reduce speed before entering a curve; use gentle acceleration to overcome inertia and pull the vehicle out of the curve.
- Use smooth, continuous steering wheel movements when approaching a turn and when returning (sliding) the wheel through the hands until the vehicle is in the proper post-turn position.
- Coach your teen to pick a target near the center of the intended travel path. This target can be used as a visual aid to aim at while steering through turns.
How close are you?

**Goal:** Teach your teen how to tell where their vehicle is in relation to other vehicles or objects.

**Location:** A large, level, mostly empty area with clearly painted pavement lines and curbs.

**Lesson one – reference points**

Explain to your teen that reference points are visual guides to help them judge the car’s distance from curbs, lines, other objects, and vehicles.

**Lesson two – driver’s side curb (or line)**

- Choose a pavement curb (or line), and tell your teen that the goal is to pull the driver’s side of the vehicle 6–12 inches away. Coach them to slowly pull up parallel to the line, getting gradually closer, and stop when they think they are 6–12 inches away. Have them look at where the line intersects in the front window.
- Have your teen put the car in park and get out to check if the driver’s side wheels are 6–12 inches from the line. If it’s not the right distance, have them do it again, checking the reference points.

**View out the front windshield. Reference points will be different for everyone, depending on the vehicle and the height of the driver.**

**Lesson three – passenger’s side curb (or line)**

- Choose another curb (or line) parallel to the passenger’s side, again pulling up slowly to within 6–12 inches. Use the same gradual pull-up method, but for this side, coach your teen to stop when the curb appears to intersect the center of the hood.
- Again, have your teen get out of the vehicle to check whether the tires are 6–12 inches from the curb. Keep practicing and making adjustments, noticing the reference point, until they can do it consistently.

**View out the front windshield. Reference points will be different for everyone, depending on the vehicle and the height of the driver.**

**Lesson four – front curb (or line)**

- Teach your teen to align the front bumper between 6–12 inches from a pavement curb (or line). Have them drive slowly straight toward the curb. Coach them to stop when the curb appears under the passenger’s side mirror.
- Have your teen get out of the vehicle to check whether the front bumper is 6–12 inches from the curb. If not, have them adjust the reference point as needed and keep practicing.

**View out the driver’s side window. Reference points will be different for everyone, depending on the vehicle and the height of the driver.**

---

**Making your teen safer**

It takes more than 15 minutes every day for 6 months to complete 40 hours of practice driving. For 100 hours, it’s more than 30 minutes a day for 6 months. Studies show that the more time you drive together, the safer your teen will be when driving alone.

---

**Skill completed**

Supervisor initials

Driver initials

#RoadReady
Backing up

**Goal:** Teach your teen how to safely drive backwards in a straight line and while turning.

**Location:** A large, level, mostly empty area.

**Lesson one – before moving the vehicle**
- Coach your teen that they must turn around and look backwards through the rear window when backing up. Using mirrors or backup cameras doesn’t give a full view.
- Have your teen shift their hips and turn around until they get a good view behind the vehicle. They should drape their right arm over the back of the seat and grasp the top of the steering wheel with their left hand.

**Lesson two – backing up in a straight line**
- Check all areas behind the vehicle prior to and while backing up.
- Grasp the steering wheel with the left hand and look over the right shoulder through the rear window.
- First release the brake, then use the accelerator gently, and only when necessary, to control speed. Keep it slow.

**Lesson three – backing up in a turn**
- If turning to the left, grasp the steering wheel with the right hand, or with the left hand if turning to the right. Remind your teen to turn the wheel in the direction they want the car to travel.
- Look in the direction the car is moving through the rear side windows.
- Back into the turn slowly, first releasing the brake, then using the accelerator if needed.

**Lesson four – aligning the rear bumper to a curb**
- Choose a curb (or line) for a target.
- Have your teen back up toward the target, coaching them to stop when the curb appears near the middle of the rear right window when looking over their right shoulder.
- Have your teen put the car in park and set the emergency brake.
- Have your teen get out of the car to see whether the rear bumper is close to the target.
- If adjustments are needed, have your teen try again, establishing a new reference point. Repeat as often as needed until your teen can consistently come within close proximity to the target.

*The driver’s view out of the back passenger window. Reference points will be different for everyone, depending on the vehicle and the height of the driver.*

Driving on a quiet street – part one

**Goal:** Teach your teen to move and stop a vehicle safely and with confidence on quiet roads.

**Location:** Start in a large, level, mostly empty area. Move to a quiet neighborhood street when indicated. Out of respect to our neighbors, please do not use official state road test courses for practice.

Before moving out onto the road, make sure that your teen has reviewed the driver’s manual and is familiar with street signs, signals, pavement markings, and yield and speed laws.

**Skill review**

Starting in a quiet, large, level, empty area, review the skills learned so far. Have your teen drive several laps around the lot, practicing smooth braking and accelerating, maintaining steady speeds, steering into right and left turns, and using reference points to align the car with curbs (or lines).

**Lesson one – commentary driving**

Coach your teen to use “commentary driving” (see sidebar on page 4) throughout this lesson, if possible.

**Lesson two – lane position**

When you and your teen feel ready, move to a quiet street.

With your teen behind the wheel, first have them practice driving straight in three different lane positions. Do this for several miles, practicing each position at least 10 times:

- **Center position 1:** The most common position, with the vehicle centered within the lane. Coach your teen that they should stay in the center position under most circumstances.

- **Left position 2:** The vehicle positioned to the left side of the lane. This is best used when approaching parked vehicles and potential hazards on the right (if no oncoming traffic). It should be avoided on a hill or a curve.

- **Right position 3:** The vehicle positioned to the right side of the lane. This is usually done when making a right turn to allow for a safety margin on the left side of the vehicle.

**Lesson three – intersections**

Coach your teen on these techniques for safely approaching an intersection:

- Search for vehicles, pedestrians, signs, and traffic signals.
- Check the rearview mirror for any potential hazards behind the car.
- If it’s an intersection with traffic signals, identify who has the green light.
- If turning, put on the turn signal four seconds before making the turn.
- If a stop is required, stop behind the white stop line.
- Select the best lane for the intended direction of travel.
- Yield the right-of-way to pedestrians and other vehicles.

**Emergency vehicles**

Make sure your teen understands what to do if they encounter emergency vehicles. First, turn down the radio to listen for the direction of the emergency vehicle(s). Stay calm and pull over to the nearest curb, clear of intersections, and wait for the emergency vehicle(s) to pass.

#RoadReady
Driving on a quiet street – part two

Goal: Teach your teen to turn both right and left safely and with confidence on quiet roads.
Location: A quiet block of single-lane roads, ideally without traffic signals at the intersections.

Lesson one – right turns
When your teen is comfortable with lane positions and intersections, it’s time to practice turns. Start with right turns. Have your teen drive clockwise around the block 10–12 times:
• Pick a line at the center of the intended travel path while steering through a turn. Make sure your teen does not fixate on one specific spot, but instead focuses on a broader path.
• Focus on smooth braking into the turn and acceleration out of the turn, as previously practiced in the large, level, empty area.
• Always check mirrors before turns and signal four seconds before turning.

Lesson two – left turns
When your teen is proficient at right turns, move on to left turns. Have your teen drive counterclockwise around the block 10–12 times, coaching them on these techniques for safe left turns:
• Position the vehicle close to the yellow line in the middle of the road.
• If there is a stop sign or red light, stop with wheels pointed straight ahead before the stop line, crosswalk or intersection.
• Search the intersection in all directions for vehicles, pedestrians, signs, and signals.
• Select a gap in traffic and pull straight forward toward the middle of the intersection. Coach your teen to avoid hesitating.
• Use the yellow line on the street being turned onto as a target. Turn into the travel lane closest to the yellow line.
• When the turn is complete, let the steering wheel slide back through the hands.
• Pick a new target 15–20 seconds ahead in the center of the travel path and accelerate gradually.

Have your teen drive around the block making right turns 10–12 times. When they are proficient, drive around the block 10–12 times making left turns.

Focus ahead
Most drivers have a tendency to steer in the direction they look. If their eyes move to one side, the car may drift in that direction, too. Remind your teen to focus on a path line in the middle of their travel lane – and not fixate on lane lines or other objects. The rest of the area should be scanned quickly but frequently.

MASSACHUSETTS ARMY NATIONAL GUARD
Looking ahead

**Goal:** Teach your teen to develop defensive driving techniques and higher-level visual and anticipatory driving skills before moving on to more complex driving situations. In order to avoid last-second reactions and spot potential hazards, have your teen always look 12–15 seconds down the road. When they are looking far enough ahead, they will be able to spot hazards early and be well prepared to react to them.

**Location:** Start on a quiet neighborhood street. Out of respect to our neighbors, please do not use official state road test courses for practice. Move onto a road with light traffic when your teen is ready.

**Lesson one – IPDE system**

Teach your teen the IPDE system, a simple system to help new drivers recognize, anticipate and avoid risks before they turn into problems. IPDE stands for:

- **Identify** potential risks, like oncoming vehicles, pedestrians, obstacles, or intersections.
- **Predict** when and where there will be a conflict or problem.
- **Decide** on the best course of action.
- **Execute** that action.

Have your teen use commentary driving as they practice the IPDE system. As they drive, ask them to verbally describe their thoughts and actions in order to identify potential risks they see, predict problems these risks could cause, decide what to do to avoid them, and then execute the appropriate maneuver.

**Lesson two – stopping-distance rule**

Teach your teen the stopping-distance rule, for the safest distance to stop behind another vehicle. When your vehicle stops, you should be far enough away from the car in front of you that you can see where its tires make contact with the ground. Any closer is too close.

**Lesson three – three-second rule**

Teach your teen the three-second rule for the appropriate following distance when driving behind other vehicles. The three-second rule is an important safety measure designed to give drivers enough time to safely steer or brake to avoid problems that occur in front of them on the road.

- Start counting when the rear bumper of the vehicle in front of you passes an object.
- Count “one thousand ONE, one thousand TWO, one thousand THREE.”
- Your front bumper should not pass that same object before you’ve reached “three.”

Have your teen practice the three-second rule at least 10–12 times, counting out loud to check whether their following distance is appropriate.

---

**Don’t tailgate**

Rear-end collisions are the most common form of a car crash. Emphasize to your teen that increasing following distance behind other vehicles is the single best thing they can do to minimize the risk of a crash.
Turning around

**Goal:** Teach your teen the best ways to turn a vehicle around in various circumstances.

**Location:** Start on a quiet neighborhood street with accessible driveways. Please be respectful of neighbors and private property. Move to a multi-lane road for U-turns, if legally allowed in your area.

**Lesson one – turning around safely**

Start by coaching your teen that the safest and easiest way to turn around is to drive around the block. The less backing up, the better! Since that’s not always possible, practice other ways to turn around.

**Lesson two – two-point turns**

A two-point turn involves backing into a driveway to reverse direction. On a quiet street, have your teen identify an available driveway on the same side of the street as your car, at a point where they can see oncoming traffic for at least 200 feet.

- Pull just ahead of the driveway, making sure there is no traffic behind the car, and signal.
- Make sure the road is clear behind the car and the driveway, put the car in reverse, and then back into the driveway.
- Shift back into drive and check the road for approaching traffic from both directions.
- When it’s clear, turn back onto the road.

**Lesson three – three-point turns**

This more challenging turn should only be done when there is no other option. Three-point turns block both sides of a two-lane road, so coach your teen to make absolutely sure that the traffic is clear in both directions. Three-point turns should only be made on streets where visibility is good, when traffic is light and only when the turn is legal.

- Pull as far to the right as possible to maximize room to maneuver. Check in both directions for traffic, and cyclists, and signal left.
- Move slowly and turn the steering wheel quickly to the left, until the car is perpendicular to the street, facing the curb. Come to a stop.
- Continue checking for traffic in both directions.
- Put the car in reverse and back up while looking over your right shoulder, turning sharply in the other direction. Back up to the opposite curb, stopping just before the curb.
- Check for traffic in both directions, Signal left, shift into drive, and accelerate to the proper speed.

**Lesson four – U-turns**

First explain that U-turns can be very dangerous, and should only be done where they are legal.

- Begin the U-turn in the left lane, closest to the center line or median.
- Be sure there is enough room to make the turn without hitting the curb or any parked cars.
- Signal to indicate the direction of the turn, checking carefully for oncoming traffic.
- Move forward, turning the wheel sharply to turn around.
- Finish the U-turn in the opposite direction and accelerate to an appropriate speed.

---

**Legal U-turns**

U-turns are illegal in many locations. Make sure you and your teen only practice legal U-turns. U-turns should never be made across a double yellow line or where a sign indicates that they are prohibited.

Redefining what it means to feel safe.

Pre-Collision System\(^1\) with Pedestrian Detection\(^2\)

Dynamic Radar Cruise Control\(^4\)

Lane Departure Alert with Steering Assist\(^5\)

Automatic High Beams\(^3\)

Standard

Prototype shown with options. Production model may vary. Drivers are responsible for their own safe driving. Always pay attention to your surroundings and drive safely. Depending on the conditions of roads, weather and the vehicle, the system(s) may not work as intended. See Owner’s Manual for additional limitations and details. 1. The TSS Pre-Collision System is designed to help avoid or reduce the crash speed and damage in certain frontal collisions only. It is not a substitute for safe and attentive driving. System effectiveness is dependent on road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details. 2. The Pedestrian Detection system is designed to detect a pedestrian ahead of the vehicle, determine if impact is imminent and help reduce impact speed. It is not a substitute for safe and attentive driving. System effectiveness depends on many factors, such as speed, size and position of pedestrians, and weather, light and road conditions. See Owner’s Manual for additional limitations and details. 3. Automatic High Beams operate at speeds above 25 mph. Factors such as a dirty windshield, weather, lighting and terrain limit effectiveness, requiring the driver to manually operate the high beams. See Owner’s Manual for additional limitations and details. 4. Dynamic Radar Cruise Control is designed to assist the driver and is not a substitute for safe and attentive driving practices. System effectiveness is dependent on road, weather and traffic conditions. See Owner’s Manual for additional limitations and details. 5. Lane Departure Alert with Steering Assist is designed to read lane markers under certain conditions. It provides a visual and audible alert, and slight steering force when lane departure is detected. It is not a collision-avoidance system or a substitute for safe and attentive driving. Effectiveness is dependent on road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details. ©2017 Toyota Motor Sales, U.S.A., Inc.
Supervised driving log

Parents or guardians are responsible for making certain that their teen has completed no less than 40 hours of supervised driving (or 30, if the teen completed a Skills Development Program). The 40 hours must be completed with a licensed driver who is at least 21 years old, has at least one year of driving experience, and occupies the passenger seat next to the driver. The parent/guardian must participate in two hours of the driver’s education curriculum (unless he/she already attended within the past five years). The following form is a tool for your convenience that will help you keep track of time spent on the road, and will ensure that your teen has a diverse supervised driving experience. You want your teen to be as prepared as possible for their Learner’s Permit.

GDL systems
Graduated Driver Licensing (GDL) systems are intended to provide teen drivers with practice under the safest conditions, exposing them to more situations only as their skills and experience grow.

Parking – part one

**Goal:** Teach your teen to master angle and perpendicular parking.

**Location:** Start in large, level, mostly empty areas. You will need both angled and perpendicular spaces.

Before your teen starts parking practice, review “Skill three: how close are you?” and “Skill four: backing up.”

**Lesson one – angle parking**

The gentler turn makes this the easiest type of parking for new drivers. **Hint:** Choosing a parking spot on the left side of the car can provide more room to maneuver and a better view of traffic when backing out.

- Signal to indicate intent to turn into a parking space.
- Move forward until the steering wheel is aligned with the first pavement line marking the space.
- Look at the middle of the parking space and turn the wheel sharply at a slow, controlled speed.
- Steer toward the center of the space, straightening the wheel upon entry.
- Stop when the front bumper is six inches from the curb or from the end of the space.
- After you’ve parked, put the gear in park for automatic transmissions (for manual transmissions, put the car either in first or reverse) and set the parking brake. Shut off the ignition and remove the key. Check for traffic prior to getting out. Lock the doors.
- Opening vehicle doors poses a very serious threat to bicyclists. When opening a vehicle door, drivers and passengers are encouraged to check their rear-view mirror, check their side-view mirror, then open the door with their far hand. For more information see page 37.

**Lesson two – perpendicular parking**

The steps are the same as angle parking, but the sharper turn into perpendicular spaces may require more practice.

**Lesson three – exiting spaces**

- With a foot on the brake, shift into reverse, which will signal that you will be backing up.
- Turn around to look for oncoming traffic.
- For angled spaces, back up straight until the driver’s seat is even with the bumper of the next vehicle on the turning side. For perpendicular spaces, back up straight until the windshield is aligned with the bumper of the next vehicle.
- Quickly turn the wheel in the direction that the rear of the car needs to go.
- Glance forward to make sure the front bumper is clear of the car on the other side.
- When the front bumper clears the other vehicle, stop, shift into drive, and pull forward to complete the exit.

Practice makes perfect

Plan to spend a good amount of time on parking practice with your teen — it’s a difficult skill to learn. Many crashes happen in parking lots, and mastering parking skills is an important way to help avoid collisions. Have your teen practice angle and perpendicular parking 15–20 times each.

Parking – part two

Goal: Teach your teen to master parallel parking.

Location: A street with marked parallel parking spaces at a time of day when traffic is light.

Lesson one – parallel parking

Parallel parking is a difficult maneuver for new drivers, so patience is key. Many drivers never learn to do it well, especially in areas where it’s not common. Because of the difficulty of learning parallel parking, and because there are several different teaching methods, this skill is sometimes best taught by a professional driving instructor. Assess your own parallel parking skills and your teen’s abilities before beginning.

- Select an available space on the passenger’s side of the car.
- Signal when approaching the space and check mirrors for traffic behind the vehicle.
- Move forward past the space until lined up directly parallel to the car parked in front, 2–5 feet away. Being too close or too far away will make parking more difficult.
- With a foot on the brake, shift to reverse and turn around to check for traffic and make sure the travel path is clear.
- Release the brake, start backing up slowly, and start to make an “S” turn, turning first right and then left.
- Glance both forward and backward repeatedly to check the space around the car while turning.
- Once the rear of the car is mostly in the space, start turning in the other direction to straighten out.
- Adjust the vehicle’s position as needed to center it in the space.
- Check to see if the wheels are 6–12 inches from the curb. If not, pull out and try again.
- Always check for passing vehicles and cyclists before you open your door.

Lesson two – exiting a parallel parking space

- With a foot on the brake, shift to reverse, turn around, and back as close as possible to the vehicle behind you.
- Check for traffic, signal, and shift into drive.
- Make sure the travel path is clear, then move slowly forward while steering rapidly out of the space.

Lesson three – parallel parking on a hill

Make sure the vehicle is in park and the parking brake is properly engaged. To prevent the vehicle from rolling into traffic, instruct your teen to turn the front wheels as follows:

- Toward the curb when parking downhill
- Away from the curb when parking uphill

If there is no curb, have your teen point the wheel so that the car would roll away from traffic if it moved.

Have patience

When practicing parallel parking, your teen will probably hit the curb several times. Tell them not to worry – even the best parallel parkers do this often. Coach them to pull out of the space and try again, adjusting their turning angle as needed.

Skill completed
Driving on rural roads

Goal: Teach your teen to drive safely and with confidence on two-lane rural roads.

Location: A two-lane rural road.

Lesson one - gravel roads

Gravel roads present their own special road safety challenge; the issue is traction. Driving on loose gravel is harder than driving on pavement because your tires don’t have the traction needed to give you stable control. Slow down, avoid sudden turning, accelerate and brake slowly, and increase your following distance to six seconds. Be particularly aware of gravel “windrows,” piles of gravel near the road edge, used for highway maintenance.

Lesson two - driving hazards

Large/slow vehicles: Slower trucks, farm vehicles, and road maintenance equipment are likely to make wide turns at unmarked entrances. Use caution and make sure the driver can see your vehicle before passing.

Sharp drop-offs and gravel shoulders: One of the most common driving hazards is running off the road. The urge to overcorrect is strong and often results in a serious crash. If you run off the road, follow these steps to ease your vehicle back onto the road:

• Do not turn the wheel; continue driving straight.
• Take your foot off the accelerator.
• Find a safe place to reenter the road.
• Turn on your turn signal and reenter the road when it is clear.
• Do not apply brakes until regaining control of the vehicle.

Restricted visibility: Trees, cornfields, buildings, and hills can block a driver's view of oncoming traffic, or traffic entering from the side. Identify blind spots to better anticipate and be prepared for potential dangers.

Uncontrolled intersections: They are not controlled by yield or stop signs. Use caution, slow down, and be prepared to stop for oncoming traffic. The vehicle on the left should yield.

Animals: If unable to stop for an animal crossing the road, do NOT swerve – swerving makes it hard to keep control. The most serious crashes happen when drivers swerve into oncoming traffic or roll into a ditch.

If you see an animal, slow down and be prepared to stop. Always be on the lookout, especially at sunrise and sunset. October and November are peak months for deer crashes. Deer travel in groups; if you see one, look for more.

Hills and curves: These are often steeper and sharper on rural roads than on interstate highways. Before reaching the crest of a hill, or entering a curve, slow down, move to the right side, and watch for traffic.

Railroad crossings: Always slow down, look both ways, and be prepared to stop. On rural roads, many railroad crossings are marked only with a round yellow ‘Railroad Crossing Ahead’ warning sign and a white X-shaped railroad crossing. There may not be flashing lights, warning bells, crossing gates, or pavement markings.

Multi-lane roads – part one

Goal: Teach your teen to drive safely and with confidence on busier, more complex, multi-lane roads.

Location: A busier, multi-lane road. Choose a time with limited traffic, such as a weekend morning.

Skill review

By now, your teen should be comfortable driving on quiet roads. Before starting multi-lane road practice, it’s important to review some key information from previous lessons. The following skills are crucial to safe driving on busier, more complicated roads.

Lesson one – mirror positioning, monitoring and blind spots

Refer to Skills one and two. Clearly seeing the adjacent traffic is especially important on multi-lane roads. Remind your teen to check the mirror positions when entering the car, and to constantly monitor the traffic around them.

Lesson two – stopping distance

Refer to Skill six. Remind your teen that when stopping their vehicle behind another one, they should be far enough back to see where the other car’s tires meet the road.

Lesson three – following distance

Refer to Skill six. Review the three-second rule with your teen, emphasizing that increasing following distance is the single best way to reduce crash risk. This gives the driver visibility, time, and space to avoid crashes.

Lesson four – safe lane changing

First, coach your teen not to change lanes unnecessarily. Studies show that while it may not look like it, most travel lanes flow at around the same rate. Changing lanes in an effort to save time doesn’t actually save time, but it does increase crash risk.

Ask your teen to list valid reasons to change lanes. Good answers include: to make a turn, to avoid an obstacle, to exit the road, to park, or to pass another vehicle.

Have your teen practice these lane change steps 15–20 times:

- Check traffic to the rear and the sides for an appropriate gap.
- Signal to indicate intention to change lanes.
- Recheck traffic, including a glance over the shoulder at the mirror blind spot area.
- Maintain speed or accelerate slightly before and during the lane change.
- Gradually move into the new lane.
- Adjust following distance using the three-second rule.

Other road users

Motorcycles, bicyclists, and pedestrians are more difficult to see than cars because they are smaller – and drivers tend to focus on looking only for cars. Traffic, weather, and road conditions require cyclists to react differently than motorists. It can be difficult for young drivers to judge and predict their actions. Always give motorcyclists and bicyclists a wide berth and reduce your speed.

Skill completed

Driver initials

#RoadReady
Multi-lane roads – part two

Goal: Teach your teen to drive safely and with confidence on busier, more complex, multi-lane roads.

Location: A busier, multi-lane road. Choose a time with limited traffic, such as a weekend morning.

Lesson one – right turns

Start with right turns, which are fairly simple. Right turns are always made from the right lane of the current road to the first, open lane of the new road. Look for signs and signals that indicate whether “right on red” is allowed. Practice right turns 10–12 times before moving on to left turns.

Lesson two – left turns

Left turns should almost always begin and end in the closest lane to the right of the yellow line. The yellow line in the lane being turned into should be your teen’s target. There are three types of left turns:

- **Protected left turns** with a designated left turn lane and left turn signal
- **Semi-protected left turns** made from a center or shared turn lane
- **Unprotected left turns** made from an active travel lane

Protected left turns should be made from the designated lane when the left turn signal displays a green arrow, using the yellow line in the lane being turned into as the steering target.

For semi-protected and unprotected left turns, coach your teen on these steps:

- Make sure the vehicle is in the correct lane to make a left turn.
- Signal the turn and begin slowing down at least 100 feet from the intersection.
- Move carefully into the intersection. Don’t turn the wheel until you’re ready to make the turn.
- Yield to any vehicles, cyclists, or pedestrians.
- When there is sufficient space with no oncoming traffic, move ahead into the turn.
- Choose a steering path line in the middle of the closest lane to the right of the yellow line.

Lesson three – safe passing procedures

Discourage your teen from passing other cars unnecessarily. If passing is necessary, the following steps should be observed:

- Position your vehicle more than three seconds behind the vehicle to be passed.
- Check mirrors and blind spots for oncoming traffic.
- Check the passing lane ahead to make sure there’s plenty of space before you try to pass.
- Signal intent to pass and accelerate quickly to match the speed of traffic flow.
- While passing, monitor the space in front of and behind your vehicle and check the rearview mirror for the front of the car being passed.
- When you see the front of the passed car in the rearview mirror and your vehicle is well clear, signal intent, gently and slowly move back to the original lane, cancel the signal, and maintain speed.

Making left turns

Left turns are one of the hardest maneuvers for teens to master. Be patient. New drivers often have difficulty judging the speed and distances of multiple lanes of oncoming traffic. Have them practice judging oncoming vehicles’ distance from your vehicle by counting out loud the time it takes for an oncoming vehicle to reach your car from a designated point.

Skill completed
City driving – part one

Goal: Teach your teen to drive safely and confidently in the complex environment of city driving. Note: City driving takes hundreds of hours, if not several years, to master.

Location: Busy, urban streets. Start at times when traffic is light, moving on to heavier traffic times as your teen gains practice.

Skill review

Since the busy, crowded environment of city driving is challenging for new drivers, this is a good time to review key driving skills. The most important skill for drivers is the ability to make good decisions. City driving forces drivers to make lots of decisions quickly. The three things they need to drive safely in the city are:

- **Visibility**: To see potential problems in all directions
- **Space**: To maneuver around obstacles and avoid hazards
- **Time**: To anticipate risks and make adjustments to speed or position

Lesson one – maximizing visibility and space

As you practice, have your teen focus on making decisions that will maximize visibility and space around the vehicle, increasing the available reaction time.

- **Looking ahead (refer to Skill six)**: Congested city driving leaves very little room for error. Identifying and anticipating potential problems is crucial.
- **Covering the brake**: Coach your teen that when they spot a hazard, they should “cover” the brake by taking their foot off the accelerator and holding it over the brake. This will prepare them to slow down or stop suddenly. Make sure they don’t “ride” the brake. Riding the brake confuses other drivers and puts unnecessary wear on the brakes.

Lesson two – identifying hazards

As you begin city driving practice, have your teen drive through several blocks to identify and name common hazards on busy, congested streets. Ask them to describe how they will safely deal with each hazard they identify.

Such hazards may include:

- Parked cars, cars entering or exiting parking spaces, and car doors opening
- Delivery trucks stopping suddenly, with drivers racing to and from the trucks
- Buses making frequent stops, loading and unloading passengers
- Blind alleys, with cars or cyclists darting out
- Pedestrians and cyclists moving unpredictably, crossing streets illegally, etc.
- Limited visibility and intersections spaced at shorter intervals
- Aggressive drivers competing for lane space and parking spots
- Stop-and-go traffic flow

Looking ahead, identifying and anticipating potential problems is crucial for safe driving.
City driving – part two

**Goal:** Teach your teen to drive safely and confidently in the complex environment of city driving.

*Note: This is not a goal that will be achieved in a single session. Spend as much time as possible with your teen practicing safe city driving skills.*

**Location:** Busy urban streets. Start at times when traffic is light, moving on to heavier traffic times as your teen gains practice.

**Lesson one – avoiding obstacles**

**Focus on lane position to avoid obstacles:** City driving involves many circumstances in which travel lanes are shared, congested, and partially or fully blocked. During practice sessions on busy city roads, have your teen identify these steps to safely avoid obstacles:

- Identify right-lane obstacles, such as stopped buses, parked cars, delivery trucks, and cyclists.
- Identify left-lane obstacles, such as vehicles waiting to make a left turn, or cars traveling in the opposite direction drifting over the center line.
- Identify the least-congested travel lane. *Hint: On a three-lane road, this is usually the center lane.*
- Position the vehicle in the lane at the greatest distance possible from any obstacles.

It can be tempting to pass vehicles on congested streets, when obstacles or traffic volume slow traffic. However, this can be dangerous, due to closely spaced intersections, irregular traffic flow, cars entering and exiting parking spots, etc. Coach your teen to avoid passing on busy city streets.

**Lesson two – deadly distractions**

What happens inside the car can be just as dangerous as what happens outside. *Engaging in distracting activities while driving can be deadly, especially for young drivers.* Ask your teen to list dangerous driving distractions. Their answers should include:

- Talking, texting, or dialing a phone
- Changing radio stations, or shuffling/streaming music
- Passengers, pets, or objects moving in the car
- Eating, drinking, or smoking
- Searching for an item
- Intense or emotional conversations
- Putting on makeup or looking in the mirror

Coach your teen to avoid distracting activities whenever possible, but especially in busy, congested environments. Remind them to focus on keeping as much space as possible around the vehicle at all times.

**More is better**

City driving skills take a long time to acquire. Spend as much time as possible driving in many circumstances with your teen. This should include driving at night and in inclement weather. Plan trips to less familiar places where you might not normally travel.

Driver initials

#RoadReady
Highway driving – part one

Goal: Teach your teen highway basics and how to safely enter and exit a highway.

Location: Start on a multi-lane highway with easily accessible exits, at a time when traffic is light, such as a weekend morning. Move on to practice at heavier traffic times when your teen is ready.

Lesson one – observation

Before your teen gets behind the wheel on the highway, have your teen spend some time on highways with you as the driver and your teen as the passenger. Emphasize the importance of looking ahead to anticipate potential problems, and explain key highway features, such as:

- The different kinds of interchanges
- The meanings of highway signs and signals
- The meanings of different lane lines and markings

Lesson two – on-ramp segments

Explain the three segments of on-ramps, and how they’re used:

- Entrance area: The driver searches the highway and evaluates how much space they have to enter and what speed is needed.
- Acceleration area: The driver brings the vehicle up to the speed of highway traffic flow.
- Merge area: The driver uses this space to merge into the traffic flow.

Lesson three – merging

Teach the steps for merging onto a highway:

- Check for on-ramp speed signs.
- At the entrance area, make quick glances at the highway, scanning for vehicles and entry gaps.
- In the acceleration area, signal to show intent to enter the highway and adjust speed to match the traffic flow.
- In the merge area, enter the flow of traffic, checking mirrors and blind spots.
- Turn off the turn signal and begin looking ahead to anticipate problems or upcoming lane changes.
- Do not completely stop in the entrance area unless absolutely necessary.

Lesson four – exiting

Teach the steps for exiting a highway:

- Identify the exit well ahead of time.
- Scan traffic for problems when approaching the exit, but don’t slow down on the highway.
- Start to signal four to six seconds before reaching the ramp.
- Upon entering the ramp, tap the brakes and begin rapidly reducing speed.
- Slow down to the posted exit ramp speed limit before reaching the curve.

Practice both merging and exiting 10–12 times each, or more if needed for your teen to feel comfortable.
Highway driving – part two

**Goal:** Teach your teen to maneuver safely in complex highway driving environments at higher speeds.

**Location:** Start on a multi-lane highway with easily-accessible exits, at a time when traffic is light, such as a weekend morning. Move on to practice at heavier traffic times when your teen is ready.

**Lesson one – steering technique**
Once on the highway, coach your teen on steering technique. At fast highway speeds, excessive steering can be dangerous and lead to loss of control. Remind your teen to steer gently on highways.

**Lesson two – lane changing**
In the high-speed, complex highway environment, lane-changing skills are very important. Have your teen spend several miles practicing the lane-changing and passing skills previously learned in “Skill ten: multi-lane roads”, until they are comfortable performing them at highway speeds. Remind your teen to:
- Watch for merging vehicles and move one lane left to make space for them when needed.
- Change lanes one at a time only.
- Watch mirrors for tailgaters and move to another lane to let them pass.

**Lesson three – three-second rule**
Review the three-second rule for following distance, learned in “Skill six: looking ahead.” Additionally, coach your teen to use a three-second rule for these highway driving circumstances:
- Merging onto a highway
- Changing lanes
- Exiting a highway

**Lesson four – challenging road conditions**
Coach your teen to adjust travel speed and vehicle position based on weather and road conditions. Once your teen is comfortable with and proficient at highway driving in good conditions, spend some practice time on highways under more challenging conditions, such as rain. Coach them to always use appropriate caution, as conditions can change quickly.

**Lesson five – road trips**
Consider planning some short day trips with your teen to a destination two to three hours away. Have them drive there and back. Find an event or place that you will both enjoy and have fun.

---

**Higher order**
Early in the training process, parental instruction tends to focus on vehicle handling. As your teen’s skills improve, try to focus on “higher order” instruction, such as scanning ahead, hazard detection, and anticipating other drivers’ behavior.

*For the first several lane changes you may need to talk your teen through the decision-making process. Double-check all mirrors to make sure that the lane is clear.*

---

**Skill completed**

Supervisor initials

Driver initials

#RoadReady
Roundabouts

**Goal:** Teach your teen how to enter and drive roundabouts safely.

**Location:** A road that leads to a one-lane roundabout. Move on to practice at two or more lane roundabouts when your teen is ready.

Roundabouts are circular intersections designed to calm traffic, increase safety, reduce stop-and-go travel, and decrease traffic delays. Roundabouts have proven to be an efficient means to move traffic through congested intersections and have shown to reduce crashes by half (all but eliminating the more severe broadside and head-on collisions). Roundabouts also offer a safe environment for pedestrians, who only have to navigate one-way traffic flow.

Driving in a roundabout can be intimidating, but it’s really quite simple when you know how it works.

**Lesson one – five easy steps**

- **Slow down:** Speeds of 15 mph or less are adequate in the roundabout.
- **Yield:** Vehicles must yield to the left before entering a roundabout.
- **Don’t stop:** Never stop once inside the roundabout. The vehicle in the roundabout has the right of way.
- **Follow signs:** Look for destination signs and exit in that direction.
- **Exit:** Look to your right, check your mirror and use your turn signal.

**Lesson two – emergency vehicles**

- If you have not entered the roundabout, pull over and allow emergency vehicles to pass.
- If you have entered the roundabout, continue to your exit, then pull over and allow emergency vehicles to pass.
- Avoid stopping in the roundabout.

**Lesson three – two or more lane roundabouts**

- As you approach, observe the signs and arrows to determine which lane to use before entering.
- Black and white signs on the side of the road and white arrows on the road will show the correct lane to use.
- If you want to make a left turn, stay in the left lane or other lanes that are signed and marked as a left turn.
- To make a right turn, stay in the right lane or other lanes that are signed and marked as a right turn lane.
- If you want to go straight, observe the signs and arrows to see what lane is correct.
Adapting to new landscapes

Mountain driving
Some hazards you should be aware of are: steep hills, changing weather, wildlife, and rocks in the roadway. If your vehicle experiences difficulty traveling up steep roadways, pull off the road at the first place you may do so safely, or stay in the right lane to allow other vehicles to pass. Here are some added tips:
• Pay special attention to speed limit signs and warning signs, such as those warning of curves, steep hills, or other hazards.
• Watch for bicyclists near the right edge of the road.
• Use lower gear to control speeds while going up or down long, steep hills.
• Yield to vehicles going uphill if you are traveling downhill on a narrow road.
• Do not coast downhill by shifting into neutral or disengaging the clutch.

The higher the altitude, the less oxygen there is in the air. Some people may react to the decrease in oxygen. They may develop mild symptoms, such as headache, nausea, and fatigue. Remember, insufficient hydration can lead to the onset of symptoms of altitude sickness. Even if they are mild, they can affect your alertness as a driver.

Rural driving
When driving in rural or country areas, there are a number of situations that require special attention. Watch for driveways, farm equipment, railroad crossings that might not be marked, and bridges that are narrow and poorly surfaced. Some intersections may be hidden by trees, brush, and crops. Animals often are found wandering along the roadway. Extra care and slower speeds should be used when driving on gravel roads because of the reduced traction due to the road surface. The road surface can be affected by loose gravel, slippery conditions after rain or snow, ruts in the driving lanes, and washboard conditions. When approaching oncoming vehicles, watch for soft shoulders or the absence of shoulders.

Safety around snowplows
When you see lights from a snow plow, slow down and use caution.
• Give snowplows room to work: The plows are wide and can cross the center line or shoulder.
• Do not tailgate: It’s dangerous and unnecessary. Remember large trucks have large blind spots.
• Avoid passing, especially at night: If you must pass, be extremely cautious and beware of the snow cloud.
• Keep your distance and watch for sudden stops and turns: A snowplow operator’s field of vision is restricted. You may see them, but they don’t always see you.

Note: Four-wheel drive (4WD) vehicles do not stop faster on ice and snow than two-wheel drive (2WD) vehicles. The heavier the vehicle, the longer it takes to stop, no matter the vehicle’s wheels.

Overconfidence
After becoming proficient in basic driving skills, teens can become overconfident and begin to drive faster, follow other cars more closely, brake abruptly, etc. Gently and continuously remind your teen to stay three seconds back from other vehicles and always drive with caution.
Continuing education

Learning doesn’t stop when your teen has received their license. It’s important to continue teaching and building upon all the new skills learned. As you continue the supervision process, think about these three areas of focus:

- **Spend as much time as possible driving with your teen.**
- **Drive in a wide variety of conditions** (weather, time of day, different traffic volumes, etc.).
- **Focus on “higher level” learning**: scanning ahead, recognizing hazards, and learning to anticipate the behavior of other drivers.

Now that your teen has become proficient in the basic operational skills of driving, it is essential that they be exposed to a wide variety of driving circumstances and conditions. Make a point of driving with them in different situations that they have not yet experienced, and do it for all types of roads – on quiet neighborhood streets, multi-lane roads, and highways. Drive with them at different times of the day, in poor weather, and with varying levels of traffic. It’s much better that they experience these conditions with you, rather than alone or with other teens.

Much of what has been discussed to this point has related specifically to the basic skills your teen will need to be a safe driver. Now, your goal is to ensure your teen is thinking intelligently and making the right decisions as a driver. Sometimes after teens become proficient with the basic skills, parents/guardians will often “step back,” becoming less involved in their teen’s supervision. But there’s still a lot to learn; their teen’s education is not complete.

Be clear with your teen that the training process is ongoing and that you will continue to provide input into their development so that you both stay in the learning/teaching mode.

Even the best new drivers are likely to make mistakes. These mistakes are great teachable moments for “higher order” instructions. So instead of saying, “Stop sooner,” advise your teen to try to focus on looking ahead and anticipating events, with an emphasis on good judgment, good decision making, and hazard perception. The shift from a basic comment to a more advanced focus is perhaps the most essential element of educating your teen at this point in the learning process.

As your teen drives, discuss specific hazard areas, possible areas of conflict, and blind spots where trouble may hide. Teens tend not to be as good at anticipating these trouble areas as experienced drivers. A good exercise is to have your teen describe the blind spots and possible areas of conflict they see. It will let you know that they are thinking, anticipating, and driving intelligently.

**New Vehicle Technology**

There is an ever-increasing amount of safety technology in today’s cars. Features like automatic emergency braking, blind spot monitoring, and forward collision warning keep us all safer, but only if they’re used correctly. It’s important to understand how these advanced driver assistance features work, as well as their limitations. A key point is to remember these are driver “assistance” features and not driver “replacement” features.

The easiest way to ensure you’re using the features correctly is to carefully review your car’s manual. Read about any features that are new to you and make sure you know how they work. If you still have questions, then reach out to the dealership for full explanation. Once you understand the technology, share that information with your teen driver to ensure that you both understand.

Check out this website for additional information: [https://mycardoeswhat.org/safety-features/](https://mycardoeswhat.org/safety-features/)
Practice in other conditions

For new drivers, it can be challenging to drive in new and unfamiliar conditions, such as inclement weather, at different times of day, and with varying traffic volume. It’s best that you provide guidance before they experience these conditions on their own.

Night driving

A driver’s reaction depends on their vision, which is limited at night, making it difficult to make judgments and see pedestrians, bicyclists, and other obstacles. Some tips to keep in mind:

• Glare from headlights makes it difficult to see. Looking toward the right side of the road and flipping the rearview mirror can help to reduce glare.
• Headlights should be turned on before the sun goes down to increase visibility.
• High beams should only be used when other drivers won’t see them, such as on roads with little traffic.
• To compensate for reduced visibility, drive more slowly and at a greater following distance.

Wet/slippery roads

Coach your teen to practice the following:

• Turn on the wipers as soon as the windshield becomes wet.
• Turn on the low-beam headlights; this helps others see you.
• Drive 5 to 10 mph slower than normal and increase your following distance to 5 or 6 seconds.
• Be more cautious, and slow down on curves and when approaching intersections.
• Turn the defroster on to keep windows from fogging over.

Hydroplaning

Hydroplaning occurs as a result of water on the road that is deeper than the tire tread. This reduces friction and can result in the loss of control. If you can see deep water, reflections on the pavement, or that the car ahead leaves no tracks on the water, these are indications your car could hydroplane. Slow down.

Fog

Use low-beam lights or fog lights if your vehicle has them. Don’t use high beams – they reflect off the fog causing reduced visibility. Slow down until your speed matches your ability to see, even if it means slowing to a crawl.

Snow

Make sure your vehicle is clear of snow and ice before driving. Driving can cause snow/ice to slide and block your view, or fly off and strike other vehicles.

• When starting to drive in snow, keep the wheels straight ahead and accelerate gently to avoid spinning the tires.
• Decrease your speed to make up for a loss of traction. Accelerate and decelerate gently, and be extra careful when braking.
• Stopping distances can be 10 times greater in ice and snow. Begin the slowing-down process long before a stop. Brake only when traveling in a straight line.
• Look ahead for dangerous spots, such as shaded areas and bridge surfaces that may be icy when the rest of the road is clear.
• Stay far behind the vehicle ahead so you will not need to come to a sudden stop, which can cause skidding.

Drowsy driving

Staying alert means focusing on the road and not driving when fatigued. Review signs of drowsy driving, such as difficulty focusing, frequent blinking, or drifting from your lane. Remind your teen to take a break after driving for 2 hours, or after 100 miles. Teens should avoid driving at times they would normally be sleeping.
Teens’ biggest dangers

Newly licensed teens crash much more often than older, more experienced drivers. Below are the most common trouble areas for young drivers:

Other teens
Research is clear on the fact that risky teen driving behaviors increase in the presence of teen passengers. A teen who is driving with other teens in the car is more likely to crash. And the more kids there are in the car, the stronger the likelihood of a crash. This is the primary reason many states have passed laws that restrict the ability of teens to drive with their peers.

Seat belts
The unfortunate reality is that teens buckle up far less than adults. A 2008 study showed that belt use amongst teens is the lowest of any age group, just 76 percent compared to a national average of 85 percent. In fact, the majority (58 percent) of young people 16 to 20 years old who were involved in fatal crashes were unbuckled. Whether sitting in the front or back of a car, buckle up every trip and remind other passengers to buckle up too. It could save their lives, and yours. Please visit NHTSA's website for more information https://www.nhtsa.gov/risky-driving/seat-belts

Drugs and alcohol
Teens are at far greater risk of death in an alcohol-related crash than the overall population. This is despite the fact that they cannot legally purchase or publicly possess alcohol in any state. When alcohol is added to the inexperience of teen drivers, the results can be deadly. In 2016, nearly 20 percent of teenagers involved in fatal crashes had been drinking. Marijuana is the drug that’s most commonly found in the blood of drivers who have been in a car crash. It is important to enforce a zero-tolerance policy at home. If your teen uses any alcohol or drugs, they cannot drive, nor should they ride with anyone who has been drinking or using drugs — in any amount.

Fatigue
As teens get older their bedtimes get later, but waking times do not tend to change. From ages 13 to 19, nightly sleep is reduced by 40–50 minutes. Teen drivers who sleep less than 8 hours a night are 33 percent more likely to crash than teens who get more than 8 hours of sleep. This lack of sleep can result in depressive moods, more risk-taking behaviors, and lower grades. It further reduces a person’s ability to process information, be attentive, and have good reflexes, which are all crucial to safe driving. Studies have shown that being awake for 18 hours has a similar impact to having a blood alcohol content (BAC) level of 0.08.

Distracted driving
A driver’s primary responsibility when behind the wheel is to focus on the act of driving. Any behavior that distracts from this activity increases the risk of a collision. In this age of electronic communication, the dangers of distractions have increased significantly. Use of electronic devices for any purpose – to send or receive communications, to surf the web, to view images, video, or anything at all – should absolutely be avoided.

Inexperience
Just as it takes years to perfect any skill – athletic, artistic, or otherwise – it also takes years to be a truly good driver. Until teens are much more experienced, they run a greater risk of crashing, getting hurt, and potentially dying. A driver’s license makes them a driver. Experience makes them good drivers.

Night driving
For teens, the most severe crashes occur at night and on weekends. Night driving is challenging for all drivers, but novice drivers do not have the experience to anticipate and react when visibility is reduced. When teens drive at night, it is more often with a lack of adult supervision, with other teen passengers, and at higher speeds – all of which are factors that increase risk.
Sharing the road – part one

When driving on the highway, you are at a serious disadvantage if involved in a crash with a larger vehicle. In crashes involving large trucks, the occupants of a car – usually the driver – sustain 78 percent of fatalities.

In order to keep you and your teen safe on the road, you should be extra cautious when driving around large trucks and buses. Sharing the road with larger vehicles can be dangerous, if you are not aware of their limitations. Here are a few tips to help you drive safer to prevent a crash and minimize injuries and fatalities if one does occur:

Cutting in front can cut your life short
If you cut in front of another vehicle, you may create an emergency-braking situation for the vehicles around you, especially in heavy traffic. Trucks and buses take much longer to stop in comparison to cars. When passing, look for the front of the truck in your rearview mirror before pulling in front, and avoid braking situations.

Watch your blind spots – the “no-zones”
Large trucks have blind spots, or “no-zones,” around the front, back, and sides of the vehicle. These no-zones make it difficult for the driver to see. Avoid being caught in a truck’s no-zones. If you can’t see the truck driver in the truck’s mirror, the truck driver can’t see you.

Avoid squeeze play
Be careful of trucks making wide right turns. If you try to get in between the truck and the curb, you’ll be caught in a “squeeze” crash. Truck drivers sometimes need to swing widely to the left in order to safely negotiate a right turn. They can’t see cars directly behind or beside them. Cutting in between the truck and the curb increases the possibility of a crash. So pay attention to truck signals, and give them lots of room to maneuver.

Work zones
Work zones can be very dangerous, especially when traveling on the highway. It’s important to be alert and prepared to slow down or stop. Slowing down and allowing others to merge will ensure a safe passage through work zones. Here are a few tips on work zone safety:

- **Stay alert:** Work zones are busy places where construction vehicles and workers are always moving. Be alert, and stay on the safe path that is designated throughout the work zone.

- **Take your cues from trucks:** Work zones often pop up suddenly. If you are not paying attention to the signs, you could find yourself in a serious crash. Since trucks have a height advantage and can see ahead of traffic, their brake light activity can provide a good signal of a slow-down or work zone ahead. Truck drivers know the stopping limitations of their trucks and pay close attention to traffic.

- **Merge gently:** Aggressive drivers can be extremely dangerous while driving in work zones. Work zones require time and courtesy. For a smooth passage through work zones, allow others to merge in front of you. Be especially considerate of trucks. They require more space to merge and are the least maneuverable vehicles on the road.

Sharing the road – part two

- **Scan the street for wheels and feet**: Be especially careful to look for people walking and biking before turning at intersections and driveways.
- **Yield to pedestrians**: Pay attention to the pedestrian signal and give people walking the right-of-way.
- **Double threat**: Never pass another vehicle that has stopped or is slowing down for a pedestrian. Remember, you might not be able to see the pedestrian when you approach a stopped vehicle so be aware.
- **Watch for bicycles**: People riding bicycles have the right to be on the road (and are often prohibited from riding on sidewalks), so respect their right to be there.
- **Passing safely**: Stay at least three feet away from bicyclists (and other vulnerable road users, such as garbage collectors, police officers, and tow truck operators) when passing, and don’t return to the right until well clear of the person. If there isn’t enough room to safely pass in the same lane, you must use another lane or wait for a safe opportunity to pass. Do not pass a person on a bike and then immediately turn right.
- **Avoid the “right hook”**: Look for and yield to people biking on the right when turning right.
- **Avoid the “left cross”**: Look for and yield to people walking across the street and yield to oncoming people on bikes when turning left.
- **Visibility**: Look for bicyclists at night and watch for their reflectors or lights.
- **Check blind spots**: Watch for bicyclists coming from behind, especially before turning right.
- **Doors are dangerous**: As a driver or passenger opening your car door, you should look in the mirror and physically turn your body to make sure no bicyclists are coming. Practice the Dutch Reach, outlined below.

The Dutch Reach

Car doors that are opened suddenly pose a very serious threat to bicyclists. When opening the door to step out, drivers and passengers are advised to do the following:

1. Check your rear-view mirror.
2. Check your side-view mirror.
3. Open the door latch with your far hand (the hand farther from the door).

This is called the “Dutch Reach” – or Opposite Hand Trick – and it comes from the Netherlands. It forces your body to turn outward, so that you can easily look out and back for oncoming traffic before exiting. It also prevents pushing or flinging the door open too fast. This not only protects bicyclists, but also keeps you and your door out of harm’s way!

Download our FREE mobile app to log your Learner’s Permit practice driving.

-- SMART
Log your drives, including driving conditions (road type and weather), driving notes, state requirements & more.

-- SOCIAL
Share drives and accomplishments with friends on social networks with RoadReady’s social sharing options.

-- SYNC
Connect one teen driver’s practice drive time across multiple phones by using the same log-in on each device.
